FOR UV
AND LED LAMPS

LIQUID POLY GEL

Liquid polygel combines the lightness of gel with the durability of acrylic. It provides nails with high resistance to breakage and cracking. The medium-thick, self-levelling formula allows for easy nail construction and extension. The consistency allows for nail extension using dual forms and nail forms, as well as for sculpting your extensions. The liquid polygel in a bottle ensures quick, easy and pleasant work.

ADVANTAGES:

- Combination of gel and acrylic: combines **the flexibility** of gel with **the durability** of acrylic
- The **flexible** product, adapts to the natural nail plate, reducing the risk of air bubbles
- **Durable**, resistant to mechanical damage, cracking and chipping
- **Medium-thick, self-levelling** formula, ideal for the "One Drop" no-file method
- **Strengthens** the natural nail plate
- For **apex construction** and **extending** the natural nail plate
- Ideal for **quick refills**
- **Easy** to file
- **Minimised burning sensation** - the intensity of the burning sensation may depend on the condition of the nail plate and the power of the lamp
- **Acid-free formula**
- **No intense odour** characteristic of acrylic
- **Natural look**, allows for thin, elegant manicures

LIQUID POLY GEL requires the use of a base coat applied using the "rub-in" method for excellent manicure durability. We recommend using BOOST BASE Clearell.

PRODUCT FEATURES:

- **Sticky layer (dispersion):** yes
- **Consistency:** medium thick, with self-levelling properties
- **Type of nail plate:** in good condition, flexible, thin
- **Extensions:** yes, up to 5 mm
- **Apex construction:** yes
- **Application:** natural manicure, French manicure, baby boomer
- **3-phase system:** (base, LIQUID POLY GEL, top)
- **Storage temperature:** 4-27 °C
- **Protect from sunlight:** yes
- **Viscosity index*** (viscosity of the mass): high

CURING:

Lamp type: UV 36W: 120 s
UV/LED 36W: 60 s

REMOVAL: Nail file, nail drill

SIZE: 15 ml

***Viscosity index** – a parameter determining the viscosity of a hybrid product, i.e. its density and fluidity, and thus the resistance it offers when spread on the nail plate. In practice, it directly affects the speed at which the product levels out and the ease of control during application.

HOW TO USE

STRENGTHENING THE NATURAL NAIL PLATE:

1. Prepare the natural nail plate: shape, gently buff mattify, clean and degrease.
2. Apply NAIL PREP and wait approx. 30 seconds, next apply TAPE BOND and wait approx. 30 seconds.
3. Apply an extremely thin first coat of BOOST BASE Clearell, rub it into the nail plate and cure in the lamp for 60 seconds.
4. Nałóż precyzyjnie warstwę LIQUID POLY GEL, wyrównaj ewentualne nierówności, utwardź 60 s.
5. Apply a precise layer of LIQUID POLY GEL, smooth out any unevenness, cure for 60 seconds.
6. Finish the planned manicure.
Apply any hybrid polish and hybrid top coat, cure each coat.

NAIL EXTENSIONS:

1. Prepare the natural nail plate: shape, gently buff, clean and degrease.
2. Apply NAIL PREP and wait approx. 30 seconds, next apply TAPE BOND and wait approx. 30 seconds.
3. Apply an extremely thin first coat of BOOST BASE Clearell, rub it into the nail plate and cure in the lamp for 60 seconds.
4. Trim the form and adjust it to the free edge of the nail.
5. Apply a small amount of LIQUID POLY GEL to the form, shape your extension and cure for 15-30 seconds. Remove the form.
6. Apply a second layer of LIQUID POLY GEL, build the apex and shape it. Cure for 60 seconds.
7. Wipe with an alcohol-based liquid, correct the shape with a file, buff, clean and degrease.
8. Finish the planned manicure.
Apply any hybrid polish and hybrid top coat, cure each coat.
